

# King System Airway Management

The “King Tube” is a versatile, simple-to-use airway tool that provides a patent airway and positive pressure ventilation with seal pressures. The King Airway is one of the airway devices available on the helicopter when attempts to pass an endotracheal tube have failed. Many BLS/ALS services in the region use King Airways as an alternative airway.

## Advantages:

- Provides a patent airway for superior patient ventilation.
- Offers an easy pass for a gastric tube through a second channel on the tube.
- Anatomically shaped distal tip and cuff to assist in the airway’s passage behind the larynx.
- Can be placed in 15 seconds.
- Can monitor ETCO<sub>2</sub>.
- Available in a variety of sizes.
